

ENP in Practice: Getting to the Point With Detailed Wording

The European Nursing care Pathways (ENP) nursing terminology and classification is characterized by a high degree of accuracy. In addition to the actual nursing diagnosis, the characteristics of the nursing problem are specified in detail, as are the etiologies, resources, interventions and outcomes. This fine granularity allows to narrow down the correct nursing diagnosis very specifically and establish a so-called “practice guideline”. ENP has been established in the healthcare sector for over 30 years, is constantly being further developed and regularly published in line with the latest scientific findings.

How to Create a Nursing Care Plan?

The highlight: using the ENP structure described, you can not only create highly detailed nursing care plans for use in your day-to-day work, but learn and teach nursing care planning professionally and in line with the latest standards during your training using the newly developed browser-based training platform “ENP Online”. The combination of technical content (ENP) and the tool (ENP Online) gives both training centers and individual users a decisive advantage!

Users have access to flawless, verifiable formulations that can be adopted with a single click and serve as documentation and guidelines in everyday care, standing up to any scrutiny. Practical learning is a top priority with ENP Online!

ENP Online assists pupils, trainees and students in learning how to plan nursing care in a professional manner, as well as teachers in conveying the process. In many cases, ENP Online is already being used in the field of practical guidance and is part of the curriculum.

Knowledge for Healthcare

Thieme RECOM is the contact for high-quality, innovative digital products and services in the healthcare sector. The common goal of the more than 50 employees is to optimize the daily work of all stakeholders in the international healthcare sector with digital tools as a professional and competent partner.

This mission is based on sound scientific research. An important goal is the use of intelligent knowledge management systems to contribute to decision-making support for healthcare stakeholders. The main focus is on the digital, paperless implementation of clinical documentation and on communication between all occupational groups involved in the clinical process.

Thieme RECOM also advises and trains healthcare facilities and their software companies on how to expand or optimize existing digitization approaches. The use of standardized nursing terminology in facilities plays a significant role in ensuring barrier-free and cross-sectoral patient care. RECOM is part of the Thieme Group.

Use ENP Online Quickly & Easily

ENP Online combines professional pedagogical aspects and nursing diagnostics in a vivid way.

The free starter version allows users to view and search the entire ENP catalog without any time limit and thus functions as a practical ENP browser and free reference catalog (viewer).

The PREMIUM version as a learning and training platform complements the viewer with the option of actively creating and editing nursing care plans. Of course, you can also save, edit, export, import, and print the nursing care plans you have created.

No Technical Barriers

No installation or download is necessary for ENP Online! The only technical requirements for using the content available at www.enp-online.org are an Internet connection and a standard browser.

The advantages of this web-based version over a locally installed program are obvious:

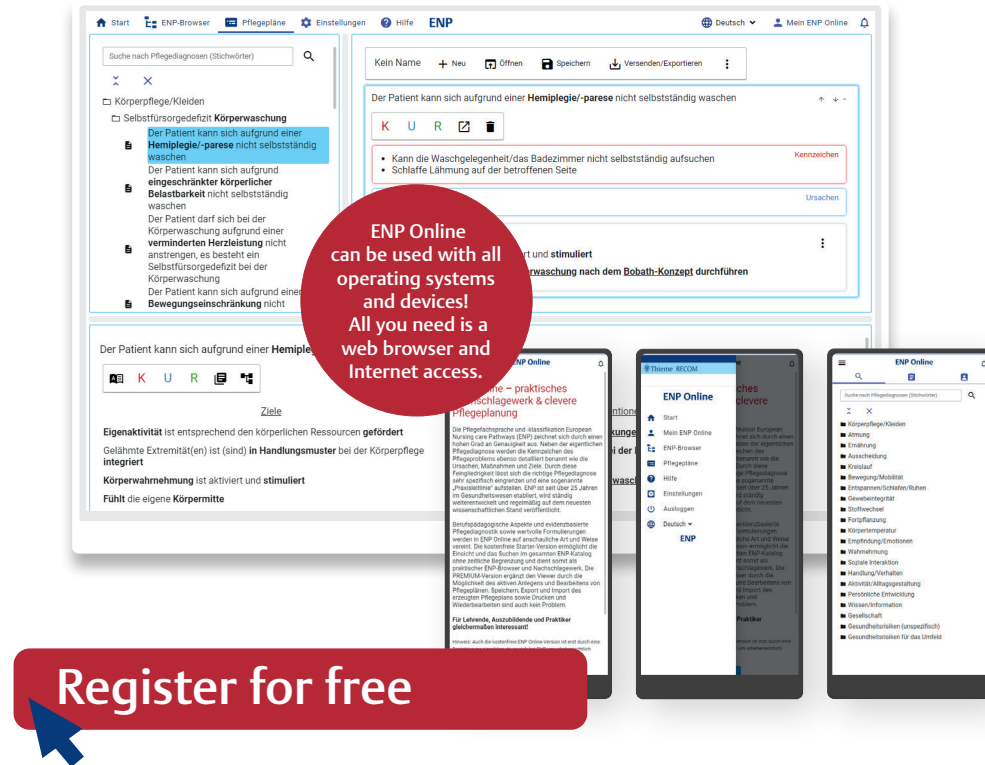

ENP Online can be used completely independently of the operating system (Windows, Mac, Linux ...) on any Internet-enabled device (computer, laptop, tablet, smartphone with adaptive display of the interface).

All you need to use both the free and paid PREMIUM versions of ENP Online is to create a user account so that you can verify your identity as an authorized user and log in to your account.

Step 1: register directly at enp-online.org

Step 2: receive confirmation link via email and activate your account

Step 3: log in and get started!

Register for free

www.enp-online.org

The free starter version, which provides access to the entire nursing terminology and classification, is available for an **unlimited period of time** after quick registration!

Would you like to use the PREMIUM version, e.g. for completing assignments as part of your training? No Problem!

A selection of attractive booking models with completely different terms, both for individual users and training centers, are available online. **Good to know: the selected license model expires automatically and does not require separate cancellation and is therefore not automatically renewed!**

For Single Users & Educational Institutions

ENP Online allows maximum flexibility in terms of teaching material, tasks or the creation of nursing care plans based on selected ENP nursing diagnoses. A “learning by doing effect” with great benefits for a group, e.g. when working on tasks in a class group or for individuals.

Whether you want to use ENP Online as single user or use group licenses for entire classes or courses – the license models available are just as diverse as the area of application!

Single User Account

A PREMIUM license for a single user, for example, is available from just €5.90 incl. VAT for one month. All PREMIUM license models for individual users, including prices, can be found at www.enp-online.org and can be booked directly via our billing partner Klarna.

Bundles e.g. For Use in Training & Teaching

Group licenses are available as so-called bundles for all types of educational institutions, staggered according to the number of accounts required (e.g. one account per student). Available from a term of one year – or for an entire training period of three years, so that you only have to book once for an educational class. A selection of possible license models can also be found on the website. Educational institutions can obtain a temporary trial license on request.
